Professional Summary

Computer Science (AI) undergraduate with hands-on experience building full-stack and NLP systems, including a DSA algorithm visualizer and an NLP-based emotion-detection chatbot. Comfortable across Python, Java, and the React/Node stack. Seeking a software engineering or AI/ML internship to ship real, production-facing features.

Education

Galgotias College of Engineering and Technology

Greater Noida, UP

B.Tech, Computer Science Engineering (Artificial Intelligence), AKTU

Sep 2024 – Jun 2028

- Relevant Coursework: Data Structures & Algorithms, Machine Learning, Neural Networks, OOP, DBMS, Operating Systems

Technical Skills

- **Languages:** Python, Java, C++
- **AI/ML:** NLP, LLMs, Prompt Engineering, Emotion Detection
- **Web:** React, Vite, Tailwind CSS, Express.js, FastAPI
- **CS Fundamentals:** Data Structures, Algorithms, OOP, System Design
- **Tools:** Git, GitHub, D3.js, Zustand

Projects

Algoorythm

2026

React 18, Vite, Tailwind CSS, D3.js, Framer Motion, Zustand, Express.js

- Built a full-stack DSA algorithm visualizer covering 12+ algorithms across sorting, graph traversal (BFS, DFS, Dijkstra), and tree structures, with real-time animated step-by-step breakdowns
- Integrated an in-browser Monaco Editor and AI assistant to explain algorithmic logic interactively, used by 20 students/testers
- Deployed a production-grade web app at anmol007-max.github.io/Algoorythm

MINDBOT

2025

Python, NLP, Emotion Detection, Generative AI

- Developed an AI-powered mental health chatbot detecting user emotions from text with 94% classification accuracy across 6 emotion categories
- Designed empathetic conversational flows that adapt responses based on detected emotional state
- Built text preprocessing, tokenization, and sentiment analysis pipelines

Token Optimizer

2026

Java, Regex, Prompt Engineering, LLM Tokenization

- Built a Java-based tokenization engine using regex pattern matching to segment natural language into structured token streams
- Developed a PromptTester module benchmarking prompt formats across multiple LLM scenarios, reducing redundant token usage by 50%
- Maintained versioned prompt datasets across iterative test cycles to improve inference efficiency

Certifications & Virtual Experience Programs

JPMorgan Chase & Co. — Quantitative Research Virtual Experience, Forge

July 2026

- Applied statistical modeling and dynamic programming to estimate customer probability of default from FICO score data

Mastercard — Cybersecurity Virtual Experience, Forge

March 2026

- Identified phishing threats and designed targeted security-awareness training to close gaps across business units

AWS APAC — Solutions Architecture Virtual Experience, Forge

Oct 2025

- Designed a scalable hosting architecture on AWS Elastic Beanstalk for a high-growth client

Infosys Springboard — Programming Fundamentals using Python, Part 1

Dec 2025
